ERP-Coin - Project Description

The purpose of our project is to increase surveillance in conservation areas, by letting volunteers have a mobile app to track their movement in the area and point them to areas on the reserve that need attention. The volunteers will be rewarded with Ethereum block chain tokens. These tokens can be spend at the ERP online store.

What has been added

- Purchasing of rewards with ERP-Coins
- Allowing users to link external Ethereum wallets
- Allowing users to send ERP-Coins to other users
- Admins are now able to review alerts and select which are broadcasted

TEST PROCESS

- Automated tests are done by Mocha

- These tests ensure that all API's provided by the back-end server perform correctly

- Unit tests are feature based, multiple tests for each request that can be made to the server

- Tests include security, validation and correctness tests
